

# Increased **safety** **and protection** for public access

With GoVivet you will have a customer friendly controlled entry and social distancing via a simple traffic light system.

Green for go: Removes any customer doubt.

**GO! VIVET**

A sign says more than thousand words.

[www.govivet.com](http://www.govivet.com)

# A GREEN LIGHT for the business:

Mostly customers wonder about: "May I come in?"

People have doubts about all those rules regarding entry regulations in shops or restaurants. A lot of ideas are found, but most of them do not really work. The best solution: **GoVivet**. Ideas that work.

**Show your customers they are welcome.**

With GoVivet you can efficiently control and signal the number of customers.

Using a wireless remote control or with automatic counter GoVivet shows green if customers may come in. When reaching the maximum number of persons in a room the light goes red. Easy to understand.

The easier we attend to the rules the earlier we can live in usual way. A second shutdown would be catastrophic for society and economy.

**With GoVivet you show a green light to remove any customers worries.**

# Quality made in Germany

GoVivet meets highest standards for performance, quality and functionality.

GoVivet can be used in a variety of locations including shops, supermarkets, pharmacies, Fuel stations, banks, hairdressers, restaurants, government buildings, museums, churches.....

Wireless  
remote control

Visible from  
both sides

Suitable for indoor  
and outdoor use

Easy setup

High power LEDs for daylight,  
without blinding

Modern  
aluminium design

# GoVivet<sup>®</sup> with automatic frequency measurement

The latest GoVivet traffic light barrier model now **includes counting functionality**. The software based counting system makes it all **work automatically**.

The light barriers use **radio transmission**, so no cabling is needed. A programmable central unit receives all data and calculates the number of persons and gives a **wireless communication** to the signal light to show red or green.

Setup and control can be done using a wireless remote control or with an **app for smartphone or tablets (Android)** to give the number of maximum people and to do a reset.

**Different configurations with various numbers of photocell sensors depending on your individual demands are possible.**

**Standard packages include:**

**Option 1:** GoVivet light system with one photocell sensor for locations with a single entrance / exit

**Option 2:** GoVivet light system with two photocell sensors for separated entrance / exit

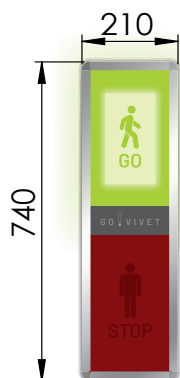

**Option 3:** Customized packages for individual demands (two or more floors, combined entrance / exits, passages etc.)

**Select your personal requirement.**
